production of other cytokines in other cell populations. The polynuclectides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28-FEB-2000; 2000US-00515126.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to isolated nucleic acid molecules and their CC encoded secreted proteins. The nucleic acids and proteins are used to CC prevent, treat or ameliorate a medical condition in e.g. humans, mice, CC rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility to a CC pathological condition. Antibodies to the proteins can also be used in CC alleviating symptoms associated with the disorders and in diagnostic conditions. The condition or susceptibility to a communoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune cC diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cardiac neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac nervous system disorders e.g. alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, can dmany other disorders listed in the specification. The polypeptides CC can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used capabilities, fat content, lipid, process, cardiac, vitamins, cmissient, in the contents. The present content, lipid, process, cardiac, vitamins, many content, lipid, process, cardiac, vitamins, capabilities, fat content, lipid, process, cardiac, and contents. The present contents and other nutritional components. The present content distance and content form part of the invention. Note: The sequence data for this patent did not form part of the printed

```
The invention relates to human novel polypeptides and their associated polynucleotides. The polypeptides and polynucleotides are useful in gene therapy for treating, inhibiting or preventing neural disorders, immune system disorders (e.g. systemic lupus erythematosus, rheumatoid arthritis and multiple sclerosis), muscular disorders, respiratory diseases (e.g. ansal vestibulitis, nasal polyps and sinusitis), reproductive disorders, cardiovascular disorders (e.g. congenital heart defects, Ebstein's anomaly and hypoplastic left heart syndrome), renal disorders (e.g. acute kidney failure and end-stage renal disease), hyperproliferative disorders (e.g. Hodgkin's disease and leukaemia), inflammatory diseases (e.g. septic shock, bursitis and appendictis), allergic reactions and conditions (e.g. asthma), blood related disorders (e.g. thrombosis, atherosclerosis and myocardial infarction) and cancerous diseases. Sequences AEX73173-ABX74167 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                   The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                   Sequence 2186 BP; 493 A; 555 C; 539 G;
                                                                                                                                                                                                                                                              New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                      14-SEP-2001; 2001JP-00328381.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC length cDNAs defined in the specification. Where a primer set complies:

CC (a) an oligo-dT primer and an oligonucleotide complementary to the

CC complementary strand of a polynucleotide which comprises one of the 5602

CC nucleotide sequences defined in the specification, where the

CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination

CC of an oligonucleotide comprises a sequence complementary to the

CC complementary strand of a polynucleotide which comprises a 5'-end

CC sequence and an oligonucleotide comprising a sequence complementary to a

CC polynucleotide which comprises a 3'-end sequence, where the

CC oligonucleotide which comprises a 3'-end sequence, where the

CC oligonucleotide comprises at least 15 nucleotides and the combination of

CC oligonucleotide which comprises as real sequence, where the

CC specification. The primer sets can be used in antisense therapy and in

CC gene therapy. The primers are useful for synthesising polynucleotides,

CC particularly full-length cDNAs. The primers are also useful for the

CC detection and/or diagnosis of the abnormality of the proteins encoded by

CC the full-length cDNAs. The primers alre also useful for the

CC DNAs easily without any specialised methods. AAH03166 to AAH13628 and

CC CAAH13633 to AAH19742 represent human cDNA sequences; AAB92446 to AAH35893

CC represent human amino acid sequences; and AAH13629 to AAH13632 represent

CC construction of the

CC The present invention describes primer sets for synthesising 5602 full-
CC length cDNAs defined in the specification. Where a primer set comprises:
CC (a) an oligo-dT primer and an oligonucleotide complementary to the
CC complementary strand of a polynucleotide which comprises one of the 5602
CC nucleotide sequences defined in the specification, where the
CC complementary strand of a polynucleotides; or (b) a combination
CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination
CC complementary strand of a polynucleotide which comprises a 5'-end
CC complementary strand of a polynucleotide which comprises a 5'-end
CC equence and an oligonucleotide comprising a sequence complementary to a
CC polynucleotide which comprises a 3'-end sequence, where the
CC conjugate of the sequence of sequence, where the
CC conjugate of the sequence of sequence, where the
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC the 5'-end sequence/3'-end sequence is selected from those defined in the
CC specification. The primers are useful for synthesising polynucleotides,
CC particularly full-length CDNAs. The primers are also useful for the
CC specification and/or diagnosis of the subnormality of the proteins encoded by
CC cDNAs easily without any specialised methods. AAH303166 to AAH3528 and
CC CANAS333 to AAH3742 represent human CDNA sequences; ABB92486 to AAB95893
CC represent human amino acid sequences; and AAH33629 to AAH33632 represent
CC CREENT invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

The invention relates to isolated nucleic acid molecules and their CC encoded secreted proteins. The nucleic acids and proteins are used to CC prevent, treat or ameliorate a medical condition in e.g. humans, mice, CC rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used CC in diagnosing a pathological condition or susceptibility to a CC pathological condition. Antibodies to the proteins can also be used in CC immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune CC diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. carests, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, CC nervous system disorders e.g. Alzheimer's disease, infections caused by acteria, viruses and fungi and ocular disorders e.g. corneal infection, CC and many other disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, CC transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used contact or preservative to increase or decrease storage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       08-NOV-2000

```
The invention relates to human novel polypeptides and their associated CC polynucleotides. The polypeptides and polynucleotides are useful in gene CC therapy for treating, inhibiting or preventing neural disorders, immune CC system disorders (e.g. systemic lupus crythematosus, rheumatoid arthritis cand multiple sclerosis), muscular disorders, respiratory diseases (e.g. cand multiple sclerosis), muscular disorders, respiratory diseases (e.g. cand multiple sclerosis), muscular disorders, respiratory diseases (e.g. cand vestibulitis, nasal polyps and sinusitis), respiratory diseases (e.g. cardiovascular disorders (e.g. disorders (e.g. disorders (e.g. disorders (e.g. hodgkin's disease and capendicitis), allergic reactions and conditions (e.g. asthma), blood crelated disorders (e.g. thrombosis, atherosclerosis and myocardial CC infarction) and cancerous diseases. Isolated polynucleotides, and encoded proteins, comprising secreted expressed sequence tags (sESTs), useful for treating various disorders such as autoimmune, infectious, and central nervous system disorders us disorders disorders.

Claim 1; Page 437; 803pp; English.

CC carebroprotective; anticonvulsant; and antidepressant. The SESTs can bave a cange of activities depending on the correct togs (RESTs), isolated from human, mouse, chicken and rat tissue CC sources. The SESTs can have a range of activities depending on the CL issues they were isolated from. The activities include: chemotactic; proliferative; immunomodulatory; haematopoietic; chemokinetic; analyesic; chemostatic; thrombolytic; antifilammatory; cytostatic; antibacterial; antifungal; antiviral; antidiabetic; antiasthmatic; vulnerary; antiulcer; costeopathic; neuroprotective; nootropic; antiparkinsonian; antipsoriatic; cc cerebroprotective; anticonvulsant; and antidepressant. The SESTs can be cc used for gene therapy and in vaccines. The SESTs are useful as probes for the identification and isolation of full-length cDNAs and genomic DNA cmolecules which correspond to the SESTs. Proteins encoded by the SESTs care useful in assays for determining biological activity and raising care useful assays for determining biological activity and raising care useful assays for determining biological activity and raising care useful assays for determining biological activity and raising care useful assays, insulin dependent diabetes), allergic conditions (Maltiple sclerosis, insulin dependent diabetes), allergic conditions (Casthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, osteoporosis, osteoarthritis, central nervous system disorders (Crohn's disease), tumours, bacterial, fungal or viral infections, depression and pooriasis. AAA45226 to AAA45931 represent linker variants which are given in the transfer of the process in the company of the process in t the exemplification of the present invention

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a
division of Invirogen.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library was not normalized. Library was constructed by Life Technologies, a division of Invitrogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence belongs to sequence cluster 6792.r For more information about this cluster, see http://www.genoscope.cns.fr/cdna?s=CSODF031AA12NP1&c=6792.r.
